

FORMATION OF ENVIRONMENTAL SAFETY CULTURE IN YOUNG PEOPLE AND ITS IMPORTANCE

Uzoqjonova Moxinur

Student of Andijan State Pedagogical Institute

Abstract: This article provides information on promotion of environmental knowledge and safety culture among young people, involvement of advanced innovative technologies in the field of ecology.

Key words: Risk, safety, culture, life, nature, human, ecological code.

INTRODUCTION

It occupies a worthy place on the world map after gaining independence, the country of Uzbekistan is unique political, social, economic, to great positive results in cultural and many fields human life and activity at the time of progress and environmental protection, which is important for of the leader of our country to environmental problems under the leadership of the ecological problems rising to the level of state policy in our republic great attention is being paid. At the same time, our planetecological tensions occurring at different points reasonable and in relation to the world around us and mother nature that it is the need of the hour for us to have the right attitude we need to understand.

The future of any society is the young generation what kind of education and in what way depends on upbringing. Such spiritual thinking only the generation that has it is the common state before the country able to perform important tasks, that's it can serve the interests of the people and determining the future fate of the Uzbek people on ecological and legal education of young people is important in the formation of concepts [7]. And this is not only the fate of the current generation, but also the future means that the fate of the generation also depends on it. Accordingly, environmental safety of the young generation from the formation of concepts related to culture It is up to our state to educate them using it is one of the important tasks, and this topic is relevant and of great importance in the development of society.

LITERATURE ANALYSIS AND METHODOLOGY

A permanent resident of our country population is increasing year by year. Including Population in Uzbekistan is April 1 of this year as of now, it is 34.03 million people, youth environmental awareness and environmental safety raising the culture, living in our society Every citizen should be careful with mother nature and the environment that surrounds us. the rare and unique nature of our country to the future young generations to form a feeling of preservation along with improving the environmental situation to discuss the world around us, nature we have to make our own contribution [6]. Of course, the damaged ecological situation cannot be corrected, but of people through ecological education attitude to nature, thinking, culture can be upgraded.

In order to positively solve existing problems, 30 of 2019 of the President of the Republic of Uzbekistan October —Uzbekistan in the period until 2030 Environmental protection of the Republic the decree on approval of the concept and No. 434 of the Cabinet of Ministers dated May 27, 2019 according to the decision "Ecological in the Republic of Uzbekistan". adoption

of the concept of educational development environmental to the young generation, especially young peopleschool, family and in the formation of safety culture scientific-theoretical development of neighborhood cooperation and defining the legal basis and a number of new tasks put the implementation[1].

This decree is ecological in our country elimination of problems, people's return to nature improvement of attitude, environmental protection transparency in the activities of state bodies in the field serves to provide. The decree is about ecology important tasks are defined.

RESULTS AND DISCUSSION

Environmental awareness and environmental awareness of the population of our country paying special attention to the issue of raising culture became a big reality in our social life.: Our country head of the —The most important issue is the environment of the population we need to think seriously about raising the culture. Of course, such problems can only be solved administratively cannot be solved, it is in the hearts of the young generation to mother nature by nurturing a sense of love and belonging to him they emphasized that it is possible to achieve. That's it on the ground of sustainable development in our country is the benefit of current and future generations - our children interest, not to endanger them, clean for them, creating a healthy and safe environment and a prosperous life it is permissible to mention that there is an issue[2]. Our country these conceptual ideas of the leader and in this field thanks to the wise policy, our youth recognize their identity, concepts of ecological and legal education in the formation and implementation of their activities they are trying.

Our wise leader in his address to the Oliy Majlis environmental protection and ecological situation paid special attention to the issue of improvement. While listening to the appeal, regions in the republic ensuring environmental safety in the section, natural rational use of resources, as well as territories improving sanitary and environmental conditions at a glance It is obvious that it is related to environmental problems However, we, teachers, who work in the field of education, have huge tasks we feel that it is being loaded. Because the world One of the important tasks facing the community is now and a clean, healthy, safe environment for future generations is a matter of creation[3].

In the address, the President is a leading international "Environmental code" project involving experts emphasized the need for development. Environmental code From natural resources in the territory of the Republic of Uzbekistan with use and negative impact on the environment directly related economy and other types of enterprises are rational from natural resources regulation of the field of environmental restoration and protection in relations of use and production allows to put [4]. It should be noted that one of the existing ecological problems in the republic is of the environment by industrial enterprises and factories pollution. Therefore, this is in the Petition environmental control system in production improvement, revision of the environmental audit procedure review and private audit activities it was noted that activation is one of the important tasks [5].

The future of any society is the young generation what kind of education and in what way depends on upbringing. Such spiritual thinking Only the generation that has it is the common state before the country able to perform important tasks, that's it can serve the interests of the people and Concepts of environmental education among young people in determining the future fate of the Uzbek people plays an important role in formation [4]. And not only that the fate of the present generation, but also the fate of future generations It means that it depends on it. Therefore, it is young concepts of environmental education of the generation it is our

state to educate them using formation is one of the important tasks ahead, and this topic is relevant and of great importance in the development of society.

Analyze the problems in depth and make them scientific and theoretical generalize by drawing certain scientific conclusions from them, application in practice is related to environmental education of students to eliminate existing gaps in concepts is a task of national importance. There Therefore, we are a comprehensive school students' understanding of environmental education formation of school and family cooperation improvement, the need to study the problem of their education from a scientific-pedagogical point of view we consider it important [3].

Aggravation of environmental conditions on our planet to the development of our society, safety, livelihood of the population affects their way of life and poses a great danger to their lives. Atmospheric pollution in nature is developing and forming physical and mental development of the growing organism does not affect the situation [2]. Current information The phrase "environmental safety culture" is often used in the environment repeating. Including 2020 of the Cabinet of Ministers environmental safety in decision No. 95 dated February 18 the concept is given a wide explanation, in which: — economy of the environment and vital human interests and other activities, both natural and man-made emergency situations and the probability of their consequences it is indicated as the state of protection from negative effects [1].

Indeed, today the world has become a problem, endangering human life on a global scale analyzing the ecological situation and living in our society ecological awareness and ecological culture of citizens that upgrading is an important process, it is the natural environment and negative effects on human life interests and theirs we need to understand the need to protect from the consequences [10]. Its successful implementation is an active part of the educational system it is also possible through participation and training of citizens. Citizens of the country to protect the environment, how competent it is in the field of prevention of emergency situations and creation of environmental hazards if there is, the social-natural environment will be so safe.

In our opinion, this is ecological safety culture is damage to both the natural and social environment environmental protection, environmentally conscious environmental knowledge in the field of activity and human behavior, is a set of competencies [9].

Love for mother earth, rational attitude towards nature to be, to enjoy the beauty of the country being elegant enriches the students spiritually and spiritually formed his taste and the holy land about the well-being of his motherland and the purity of nature that it is their duty and responsibility to care they feel with their hearts. Nature protection, flora and conservation of the fauna world, preserving its riches and its rational use to the global environmental crisis Avoidance is an urgent problem facing humanity is considered one of the tasks.

Ecological culture, healthy and recommended by us in educational work aimed at forming a safe lifestyle The innovative solution includes [8]:

- the basics of scientific understanding of the world in students forming, instilling in them a sense of responsibility and education, saving natural resources use skills in their daily life absorb;
- highly humane on the basis of spiritual and moral education virtue, creativity of attitude towards mother nature, by determining the qualities of creativity and improvement formation of environmental culture;

- physical, taking into account information security decreased activity, infectious diseases, overwork and the causes of others and their harmful properties give an understanding of;
- the student's healthy life in a family environment and The formation of environmental ethics in every way, waste water not to do, not to pollute the air, plants and animals to determine the qualities of caring for the world, attention to the prevention and education of signs of indifference focus
- the concepts of environmental culture, nature and safe for people in daily life, environmentally friendly attitude to the environment formation in the example;
- teaching to observe the rules of personal hygiene and willingness to take care of your health based on them development, proper (healthy) nutrition, its regime, concepts about the structure, useful products consists of formation.

CONCLUSION

In short, environmental safety culture from among the indispensable procedures of today's man must take a solid place. Because without it, life, tomorrow the day is unimaginable. A country for the future generation nature is clean, and the mother planet is healthy leave every person living on this earth is a sacred duty. You and I to those around us, especially to repeat environmental rules to young people and to them from showing how much we act let's not get tired.
