Annotatsiya:

Mazkur maqloda muallif tomonidan Boshqaruvning umumiyl qonuniyatlarini va tamoyillariga asoslanib, ta'lif muassasasini boshqarish uchun uslubiy ko'rsatmalar tuzildi. Ta'lifni boshqarishning usullari, axborot-ma'lumotlarning keng qo'lamlari oqimi shart-sharoitlarida ijtimoiy-psixologik muhitni boshqarish usullaridan biri bo'lib, boshqaruv ob'ektiga nisbatan boshqaruv sub'ektining maqsadli ta'sir etish usuli hisoblanadi

Kalit so'zlar:

TM strategiyasi, modernizatsiya, ko'nikmal, ta'lif xizmatlari bozori, ijtimoiy-mehnat munosabatlari, Moslashuvchan korporativ madaniyat.

New Uzbekistan places completely new demands on medical university graduates. The personality of a modern medical worker should be distinguished by integrity, that is, the unity of professional and personal qualities that allow them to be competitive, remaining a highly moral person. In this regard, the goals of higher medical education are associated with the formation of the personality of a future doctor, competent and responsible, able to provide assistance, a person of mercy and compassion.

An important part of modern medical education is the formation of a teacher's professional competence.

The pedagogical foundations of the professional activity of a modern physician are ensured by the need to integrate the process of treating and educating the patient, forming in them a readiness for activities to preserve and improve health, orientation towards a healthy lifestyle, and personal responsibility for overcoming physical illness, which determine the patient's subjective position. Patient education is an important component of a doctor's professional activity, significantly influencing its results.

Pedagogical technology is a set of psychological and pedagogical attitudes that determine a special set and arrangement of forms, methods, ways, techniques of teaching, educational means; it is an organizational and methodological tool of the pedagogical process.

Pedagogical technology is a meaningful technique for implementing the educational process, a description of the process of achieving planned learning outcomes.

Teaching technology is an integral procedural part of the didactic system.

Pedagogical technology is a well-thought-out model of joint pedagogical activity for designing, organizing, and conducting the educational process with an unconditional provision of comfortable conditions for students and the teacher.

The concept of "pedagogical technology" can be represented by three aspects.

1. scientific: pedagogical technologies - a part of pedagogical science that studies and develops the goals, content, and methods of teaching and designs pedagogical processes;

2. procedural-descriptive: inventory

A technological scheme is a conditional representation of process technology, its division into individual functional elements, and the designation of logical connections between them.

Technological map - a description of the process in the form of a step-by-step, step-by-step sequence of actions (often in graphical form) with the indication of the applied means.

Main qualities of modern pedagogical technologies

A) The structure of pedagogical technology.

From these definitions, it follows that technology is maximally connected with the learning process - the activity of the teacher and the student, its structure, means, methods, and forms. Therefore, the structure of pedagogical technology includes:

a) conceptual basis;

b) the content part of training:

- learning objectives - general and specific;
- content of the educational material;

c) procedural part - technological process:

- organization of the educational process;
- methods and forms of schoolchildren's learning activities;
- methods and forms of teacher work;
- the teacher's activity in managing the process of assimilation of material;
